

PROFESSOR IAN JANDRELL, DEPUTY VICE-CHANCELLOR:  
SYSTEMS AND OPERATIONS, CORDIALLY INVITES YOU TO THE

# INAUGURAL LECTURE OF PROFESSOR KENNEDY ERLWANGER

School of Physiology, Faculty of Health Sciences

## TITLE

### No need to wait! Strategic nutraceutical use in early life for good metabolic health

The origins of ill health, including obesity and non-alcoholic fatty liver disease, can be traced to early life stages. Malnutrition during early developmental stages of life, such as the time around conception, gestation and the neonatal phase, can result in poor health outcomes later in life. Obesity and non-alcoholic disease due to high sugar consumption, place a heavy burden on healthcare facilities globally. This lecture explores the potential of strategic interventions in early life stages using plant derived chemicals to provide long term protection against malnutrition-induced poor health outcomes.

**Date:** Wednesday, 13 July 2022 | **Time:** 17:00

#### HYBRID EVENT

**Online Platform:** Zoom
