OBJECTIVE OF THE COURSE

This course aims to equip participants to:

- Explain the impact of operations management on organisational productivity, competitiveness, performance and strategy.
- Determine the role of design, ranging from product design to job design, on operational effectiveness.
- Demonstrate the use of planning and control mechanisms to manage an operations plan.
- Discuss stock and stock control principles that can be applied to optimise organisational operations.
- Evaluate the role that effective management of projects and organisational processes play in driving the organisational improvement.

PROJECTED OUTCOMES

After completion of this course successful participants should be able to:

- Determine the influence that an operational strategy has on organisational competitiveness and productivity;
- Explain the role that design plays in operations management;
- Use physical layout, technology and job design principles to optimise operations management and the customer experience;
- Use planning and control mechanisms to manage an operations plan;
- Determine the role of stock and stock control, and stock control techniques in operations management;
- Evaluate the role project management and operational processes play in driving organisational improvement;
- Assess the importance of operations management practice in supporting the overarching organisational strategy.

STRUCTURE AND TIMETABLE

Lectures will take place once a week over 14 weeks. The duration of each lecture will be two hours. The 13th lecture will be revision and will be followed by the 14th, a three hour examination.
