04 Conclusion

Background

- Increasing number of suicides and suicidal ideation in universities including Wits
- Raised need to assess the burden of common mental disorders (CMDs) among students
- Wits Mental health project – Fit Minds Study

Fit Minds Study is a students' mental health study which is conducted annually at Wits University by the Analytics and Institutional Research Unit (AIRU) since 2019.

- **Increased number** of adolescents and young adults with **poor mental health** globally.
- University students are at an increased risk.
- 1st year students at an increased and an extended risk of stress

01

Introduction

First year student

- Transitioning
- New chapter
- Adjustments
- Independent young adulthood
- New environment of learning
- Interpersonal relationships

This can be a daunting and stressful experience

These experiences lead to:

Unusually intense, chronic, uncontrollable and
overwhelming stress

Burn-out

Depression

Anxiety

Resilience

- It is the best predictors of mental health status of an individual
 - a defence mechanism which people with endangered well-being thrive when facing adversity
 - Poor stress resilience = increased risk of poor mental health
-

Objective

To assess the levels and predictors of resilience of first year university students with Common Mental Disorders (CMDs) – depression and anxiety

02

Methodology

- Wits Fit Minds Study data collected Aug/Sept 2020
 - Research design: Cross-sectional study employing quantitative methods
 - Self-administered online survey using RedCap
 - Tools used;
 - Patient Health Questionnaire (PHQ-9) – Depression
 - Generalised Anxiety Disorder (GAD-7) - Anxiety
 - Brief Resilience Scale (BRS-5) – the ability to bounce back (resilience)
 - Sample: 5 494 first time, first year students registered in 2020
 - Response rate: 1 966 (36%)
 - Descriptive Analysis
-

| Demographic factors | Severe Depression (153) | Severe Anxiety (373) | Low resilience (621) |
|-------------------------------|--------------------------------|-----------------------------|-----------------------------|
| Gender | | | |
| Male | 25% | 25% | 27% |
| Gender neutral | 0% | 0% | 0% |
| Female | 75% | 75% | 73% |
| Race | | | |
| African | 78% | 74% | 72% |
| White | 9% | 13% | 12% |
| Indian | 11% | 9% | 10% |
| Coloured | 3% | 5% | 4% |
| Chinese | 0% | 0% | 0% |
| Age groups | | | |
| 17-18 Years | 79% | 78% | 77% |
| 19 Years + | 21% | 22% | 23% |
| Place of residence | | | |
| University residence | 39% | 41% | 39% |
| Home/Pvt. Accomodation | 61% | 59% | 61% |

| University factors | Severe Depression (153) | Severe Anxiety (373) | Low resilience (621) |
|--|-------------------------|----------------------|----------------------|
| Faculty | | | |
| CLM | 10% | 12% | 10% |
| EBE | 22% | 21% | 20% |
| HS | 12% | 13% | 14% |
| HUM | 35% | 32% | 36% |
| SC | 21% | 22% | 19% |
| Program type | | | |
| General academic 1st bachelors degree | 51% | 56% | 54% |
| Professional academic 1st bachelors degree | 48% | 43% | 46% |
| Progress outcome | | | |
| Not permitted to proceed | 29% | 24% | 27% |
| Permitted to proceed | 71% | 76% | 73% |
| Wits Experience | | | |
| Good | 19% | 36% | 41% |
| Satisfactory | 18% | 9% | 51% |
| Poor | 63% | 55% | 8% |

CMDs and Resilience

04

Conclusions

- ❖ 8% of the first year students had symptoms of severe depression
- ❖ 19% of the first year students had symptoms of severe anxiety
- ❖ 68% had normal to high resilience - they have the ability to bounce from stressful situations
- ❖ Most females had severe anxiety and severe depression but low resilience (at risk)
- ❖ African students had high % of severe depression and anxiety and most had low resilience

All these results show that, when the resilience is low, then depression and anxiety is severe.

Therefore, this study recommends that initiation of programs that can strengthen students resilience in order to eliminate their chance of severe anxiety and depression - this will ultimately promote the students success
