

Short Course

This short course aims to introduce health professionals and people working in the health industry, including clinical practitioners, academics and researchers, to precision medicine and biomedical informatics. It will emphasise topical and controversial issues related to developing these fields in South Africa. Through lectures, guest seminars and interactive sessions, participants will get insights into the use of clinical, environmental and biological data, with a view to enhancing modern clinical practice. Topics will range from practical implementation of precision medicine in cancer, pharmacogenomics, and infectious diseases, to “big data” and machine learning interpretability.

Precision Medicine and Biomedical Informatics in Africa

15- 17 OCTOBER 2024

08h00 to 17h30 daily

VENUE

SBIMB, The Mount, 9 Jubilee Road, Parktown, Johannesburg

ADMISSION CRITERIA

Clinicians and STEM Graduates (Honours & above) interested in the health care domain

COST

R3500.00 per person
